SUFIYAN AHMAD BARBHUIYA

Computer Applications Student | Aspiring Software Engineer

Nagaland Gate, Dimapur, Nagaland - India
+91-873-082-7611 · sufiyan07ahmad@gmail.com

PROFESSIONAL SUMMARY

Computer Applications student with hands-on experience in **Python**, **C/C++**, **Django**, and front-end web development with **HTML**, **CSS**, and **JavaScript**. I bring a practical interest in embedded systems through **Arduino** and **IoT** projects, which has taught me to connect software logic to physical hardware. I am proficient in Google Workspace and Microsoft Office for structured documentation and collaboration, and I am fluent in English, Bengali, and Hindi, which helps me write clear technical documentation and communicate across teams. I am looking for an internship or entry-level role where I can build reliable software, learn from experienced engineers, and contribute to real product delivery.

EDUCATION

Bachelor of Computer Applications (BCA) 2025 – Present
Tetso College, Dimapur, Nagaland

Higher Secondary School Leaving Certificate (HSSLC) 2023 – 2025
Beacon Senior Secondary College, Badarpur, Assam

High School Leaving Certificate (HSLC) 2022 – 2023
Assisi Higher Secondary School, Dimapur, Nagaland

TECHNICAL SKILLS

Programming Languages	C, C++, Python, JavaScript, HTML, CSS
Frameworks & Libraries	Flutter, Django
Hardware & IoT	Arduino, IoT system design
Productivity & Tools	Git,Google Docs, Google Sheets, Google Forms, Microsoft Word, Microsoft Excel, Canva
Languages	English (Professional), Bengali (Professional), Hindi (Professional), Nagamese

PROJECTS

Hotel EL Serene : A working website for a hotel business

Tech Stack: HTML, CSS, JavaScript

- Developed a responsive professional website using **HTML5**, **CSS3**, and **JavaScript** for a hotel business in Kohima.
- Designed the interface and page structure with a mobile-first approach, reducing load time through optimized assets.

- Delivered a production-ready site demonstrating front-end fundamentals and clean code organization.
- Link :- HotelElSerene

Spoofify : A working clone of Spotify

Tech Stack: Flutter

- **Full-Stack Cross-Platform Architecture:** Engineered "Spoofify," a Spotify-inspired Flutter application supporting audio streaming across Android, iOS, and Web, integrating Google Drive via Service Accounts for centralized media delivery and Firebase Firestore for scalable, real-time user state synchronization.Deployed the application locally.
- **Algorithmic Personalization Engine:** Designed and implemented a custom content-based recommendation algorithm utilizing dynamic user interaction metrics (weighted play frequency, explicit track likes, and search behavior) to generate personalized listening feeds without third-party recommendation APIs.
- **Resilient State Management & Persistence:** Built a reactive data layer leveraging Firestore subcollections and streams to persist user libraries, custom playlists, and playback telemetry, ensuring seamless offline/online state restoration and sub-second UI updates.

Tech Stack: Arduino (C++), IoT Connectivity

- **Developed a real-time computer vision IoT interface** using Python, OpenCV, and MediaPipe to translate physical hand gestures into precise servo motor movements via serial communication.
- **Engineered a distance-invariant tracking algorithm** that calculates a fist "openness" ratio by normalizing fingertip-to-wrist distances against palm size, ensuring accurate hardware control regardless of the user's distance from the camera.
- **Optimized hardware-software integration** by implementing mathematical signal smoothing to eliminate mechanical motor jitter and adding dynamic runtime calibration for custom user gesture thresholds.

EXPERIENCE

Internship

- Contributed to Ph.D. research on **recommendation system algorithms** as a research assistant to Talinungsang, Dean of Computer Science.
- Analyzed datasets and contributed to structural research for Ph.D. studies on recommendation systems.
- Developed a **Spotify clone** application using **Flutter** to successfully test and validate the recommendation models in a live environment.

CERTIFICATIONS & ACHIEVEMENTS

- **VibeBuild Hackathon (IIT-Kharagpur):** Developed a web application using django framework and firebase to provide bias detection in news articles within a 24-hour timeframe.
- **Tetso College Hackathon:** Collaborated with a team of 4 members to build and pitch Public Eye, a working prototype focused on greivance complaint portal.
